PART 5: CARDS AND CHARACTERISTICS

OGÓLNE

5.1 UNIT CARDS

Every Unit has a **Unit Card** that provides all the information needed to use it in a game.

<< VISUAL: Annotated Unit Card with all fields numbered and labelled >>

- **Unit Name**
- **Speed:** The maximum distance in inches the Leading Model may traverse in a standard Move.
- **Split Values** (e.g. 4"/7"): Use the second value only when the Unit is reduced to a single remaining model, or when the Unit started with a single model.
- **Null Value** (-): The Unit **cannot** move or be repositioned by any means, including PLACE and involuntary movement effects.
- **Armour:** The Target Number the defender **must** meet or exceed on a D6 to cancel a hit.
- **Evade:** A secondary defensive characteristic representing agility. Used only when a rule or condition specifically grants an **Evade Roll**.
- **A Null Value** (-): The Unit cannot make **Evade Rolls**. An ability that explicitly grants an **Evade Roll** does not override this.
- **Hit Points (HP):** **Damage** a single model must sustain before it is removed.
- **Shields (Optional):** If this value is present on a **Unit Card**, add it to the **Hit Points (HP)** of the first model. The Unit is Shielded. The Unit loses its Shielded Status when the Total **Damage** assigned to it exceeds its **Shield** value or when the first model in the Unit is removed.

• The **Shielded Status** is referenced by other abilities. Losing **Shielded Status** does not remove any remaining **Hit Points**, it only ends effects that require the Unit to be **Shielded**. **Shielded Status** cannot be restored by **HEAL**.

✓ Notification

• **Size**: The model's vertical height category, used for **Line of Sight** and terrain interaction.

• **Supply Profile**: Links the number of remaining **models** in the Unit to its **Current Supply Value**. Update immediately when casualties reduce the model count to a lower bracket. Supply is used for **Deployment**, **Mission Marker Control**, and **Disengage** checks.

• **Phase Boxes**: **Special Abilities** and weapon profiles available during specific Phases.

• **Weapon Profiles**: Each weapon is assigned to either the Assault Phase or the Combat Phase and may be used only during that phase. Each weapon profile lists:

• **[RNG] Range**: Maximum effective distance. Melee weapons list **E** (**Engagement Range**). Some **template weapons** list **FT**.

• **Target**: What the weapon can hit. **Ground** (Ground **Units** only), **Flying** (**Flying Units** only), or **All** (both Ground and **Flying Units**).

• **[RoA] Rate of Attack**: **Dice** rolled per firing model.

• **Hit**: Target Number required on a D6 to score a hit.

• **Surge Type**: The **Combat Tag** that triggers the weapon's Surge efficiency.

• **S Dice**: Die type rolled to determine Surge results (D3 or D6).

• **[DMG] Damage**: **Damage** inflicted per die in the **Damage Pool**.

• **Keywords**: Special rules on the weapon (e.g., **PIERCE**, **SIDEARM**).

• **Combat Tags**: The Unit's **Combat Tags**.

• **Faction Tag**: The Faction the Unit belongs to.

5.2 SPECIAL RULES AND UPGRADES

The reverse of each **Unit Card** lists optional Upgrades available during **Army Building**.

<< VISUAL: Annotated reverse of Unit Card >>

- **Upgrades:** New abilities or weapons added to the profile.

- **Replacements (↑ FOR):** An entry showing "↑ FOR [Weapon Name]" means the weapon replaces the original entirely.

✓ Notification

- **Combat Range:** The preferred distance this Unit seeks to maintain from enemy Units.

- **Army Slot:** The slot type (Core, Elite, Support, Air, or Hero) required to field this Unit. Each Unit occupies a number of slots of this type equal to its starting Supply Value (Part 9.1.6).

- Flavour text describing the Unit's role.

- Base diameter on which the model **must** be mounted on.

5.3 TACTICAL CARDS

No commander goes into combat alone with guns. A creep tumor in a good position, a sensor sweep in reserve, or a psionic storm held back can change a lost battle into a rout. The Tactical Cards are the strategic resources, orders, and doctrines a military leader has available to him, bought before the battle and deployed when they are most needed.

Tactical Cards are purchased with Vespene Gas during Army Building (Part 9.1.4).

<< VISUAL: Annotated Tactics Card >>

- **Name:** The name of the **Tactical Card**.

- **Unique Marking:** If present, only one copy of this card may be included in an army.

- **Faction Tags:** The **Race Tag** and any **Sub-Faction Tags** that determine which armies may include this card (Part 9.1.2).

- **Army Slots:** The organisation slots unlocked when this card is included in the army (e.g., 2× Core, 1× Support). These slots are in addition to those provided by the **Faction Card**.

- **Resource Type and Value:** The faction's resource (CP for Terran, BM for Zerg, PE for Protoss) and the amount generated when this card is **Exhausted** instead of using its Special Ability.

- **Special Abilities:** One or more **Active**, **Passive**, or **Reaction Abilities** resolved using the standard rules (Parts **10.1–10.4**).

✓ Notification

5.4 FACTION CARDS

The **Faction Card** is the foundation of every army. It defines who you are, what doctrine you follow, and what forces you are permitted to bring to the battlefield.

Every army must include exactly **one Faction Card**, selected during **Army Building**.

<< VISUAL: Annotated Faction Card with all fields numbered and labelled >>

- **Faction Name:** The name of the Faction. This may also function as a keyword referenced by other rules and abilities.
- **Faction Tags:** The **Race Tag** and any **Sub-Faction Tags** that specify which **Units** and **Tactical Cards** can be included in the army (Part **9.1.2**).
- **Starting Army Slots:** The organisation slots provided by the **Faction Card** itself (e.g. 3× Core, 1× Hero, 2× Support). Additional slots are unlocked by purchasing **Tactical Cards**.
- **Resource Type and Value:** The faction's resource (CP for **Terran**, BM for **Zerg**, PE for **Protoss**) and the amount generated when this card is **Exhausted** instead of using its **Special Ability**.
- **Special Abilities:** One or more **Active**, **Passive**, or **Reaction Abilities** resolved using the standard rules (Parts **10.1–10.4**).

5.5 MISSION CARDS

Every conflict has a purpose. A contested line of **minerals**, a crashed shuttle with vital information, or a Xel'Naga relic glowing with power buried deep beneath the surface. **Mission Cards** decide what the conflict is about, how long the battle will last, and what must be achieved to win. The mission determines the fight, not the other way round.

Mission Cards are chosen during the Draft (Part **9.2**).

<< VISUAL: Annotated Mission Card >>

- **Name:** The name of the Mission.

- **Engagement Scale:** The game scale this mission is designed for (Skirmish, Standard, or Grand Offensive).

✓ Notification

- **Starting Supply:** The **Supply Pool** available to each player in Round 1.

- **Supply Escalation:** The amount by which the **Supply Pool** increases at the start of each subsequent Round.

- **Game Length:** The number of Rounds played before the game ends (usually 5).

- **Mission Parameters:** Setup instructions, **Mission Marker** states, and any special conditions that apply from the start of the game.

- **Scoring Conditions:** How players earn **Victory Points** at the end of each Round.

- **Additional Conditions:** Special rules or winning conditions unique to this mission, including any **instant** victory triggers.

5.6 DEPLOYMENT CARDS

The location from which you engage in the battle is as important as what you bring into it. A narrow canyon channels the entire attack into a kill zone. Parallel zones of **deployment** across open ground give the victory to whoever shoots first. The **Deployment Cards** determine the war's geometry, entry points, restricted zones, and the ground that must be taken.

Deployment Cards are selected during the Draft

<< VISUAL: Annotated Deployment Card >>

- **Name:** The name of the **Deployment** layout.

- **Engagement Scale:** The game scale this **deployment** is designed for (Skirmish, Standard, or Grand Offensive).

- **Battlefield Dimensions:** The required table size for this **deployment**.

- **Entry Edges:** The table edges assigned to each player. **Units** enter the battlefield from their assigned **Entry Edge** when deploying from **Reserves**.

- **Zone of Influence:** A restricted area extending 6" inward from each player's **Entry Edge**. **Enemy Units** arriving from **Reserves** cannot end their **deployment** within this area. The **Zone of Influence** does not affect **Units** already on the battlefield.

- **Marker Coordinates:** The precise measurements for positioning each numbered

Mission Marker on the battlefield.

Using the Deployment Card during Setup: Once the Deployment Card is followed, follow its instructions in this order: confirm the table dimensions

Entry Edges to each player, set Zone of Influence Markers at the corners of each player's Entry Edge, where applicable, then set Mission Markers at the listed coordinates. See Part 9.3 for the full setup sequence.
